

FOR IMMEDIATE RELEASE

Dayton International Airport to complete public circulation enhancements

-TSA checkpoint renovation is planned-

Release date: Thursday, March 17, 2022

Contacts: Linda Hughes, Marketing Manager, 937-454-8200, cell: 419-283-1414

Dayton International Airport will renovate six areas to enhance public circulation and improve functionality for travelers and staff. The improvements will include renovation of the TSA checkpoint area.

“The upgrades across the airport continue our path to needed renovation while making the airport more efficient and sustainable,” said Director of Aviation Gil Turner. “We want travelers to have a truly enjoyable and enhanced experience when they travel to and through Dayton.”

Airport users will see dust walls in the lobby and throughout the airport as the project continues. All aspects of the public circulation project are anticipated to be complete by December 2022.

The six enhancements are:

- **TSA checkpoint renovation:** The existing checkpoint area will be totally renovated, including expansion of the hallway exit lane and recomposure area to accommodate more travelers and lanes. The former CNBC shop will become part of the recomposure area, and the entire checkpoint area will receive new terrazzo flooring or carpeting and new ceilings, column covers, lighting, HVAC, and wall finishes.
- **Elevator renovation:** The older elevators in concourses A and B will be renovated, including new machinery, new cab finishes and controls, and related upgrades and code compliance modifications.
- **Roof replacement:** The improvement includes approximately 150,000 sq. ft. of new silicone-based coating/granule roofing materials over terminals areas, the central concourse and concourses A and B.
- **Window replacement:** Existing windows in concourse A will be replaced with larger storefront system openings. This improvement will include interior and exterior painting of walls near the windows.
- **Cooling tower replacements:** The airport is served by two aging cooling towers sitting on an elevated steel frame and connected to building piping through tunnels. These towers will be replaced with two new, open-circuit, induced-draft, crossflow cooling towers to include new piping, power and controls, and a modified steel frame supporting the new units.
- **Brick masonry pointing:** The brick on the north side of the baggage tunnel bridge and the roof of the aircraft rescue and firefighting house will undergo mortar repair.

The public circulation enhancements are the next step of DAY’s renovation efforts. Previous phases of the terminal modernization project included full glass curtain walls along the front entrance, terrazzo flooring depicting the history of aircraft in the Dayton region, additional restrooms, new HVAC, LEED certifications, lighted bollards along the ADA entrance drive, and new glass shelters on the entrance drive, valet parking stations and other ground

transportation stations.
