

DIY – Patio Planter Box with Stanchion

Supplies for 1 planter:

One 8-ft long 2x12

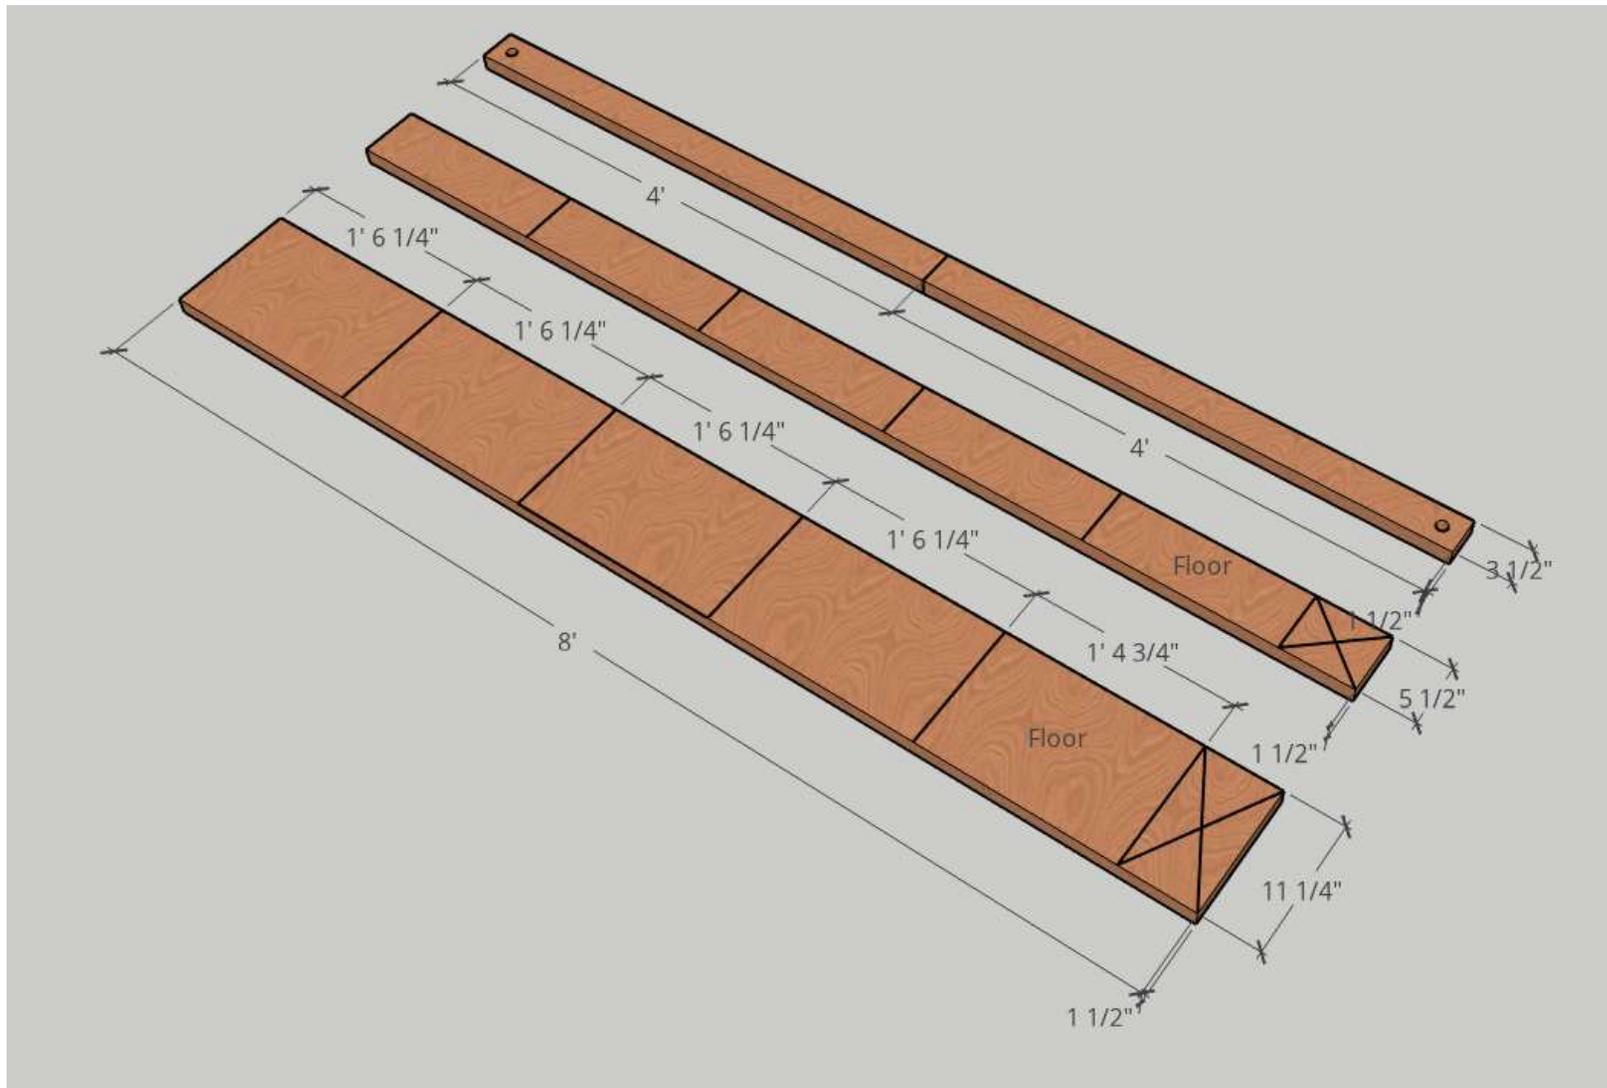

One 8-ft long 2x6

Half of an 8-ft long 2x4

Approximately 40 3-inch deck screws

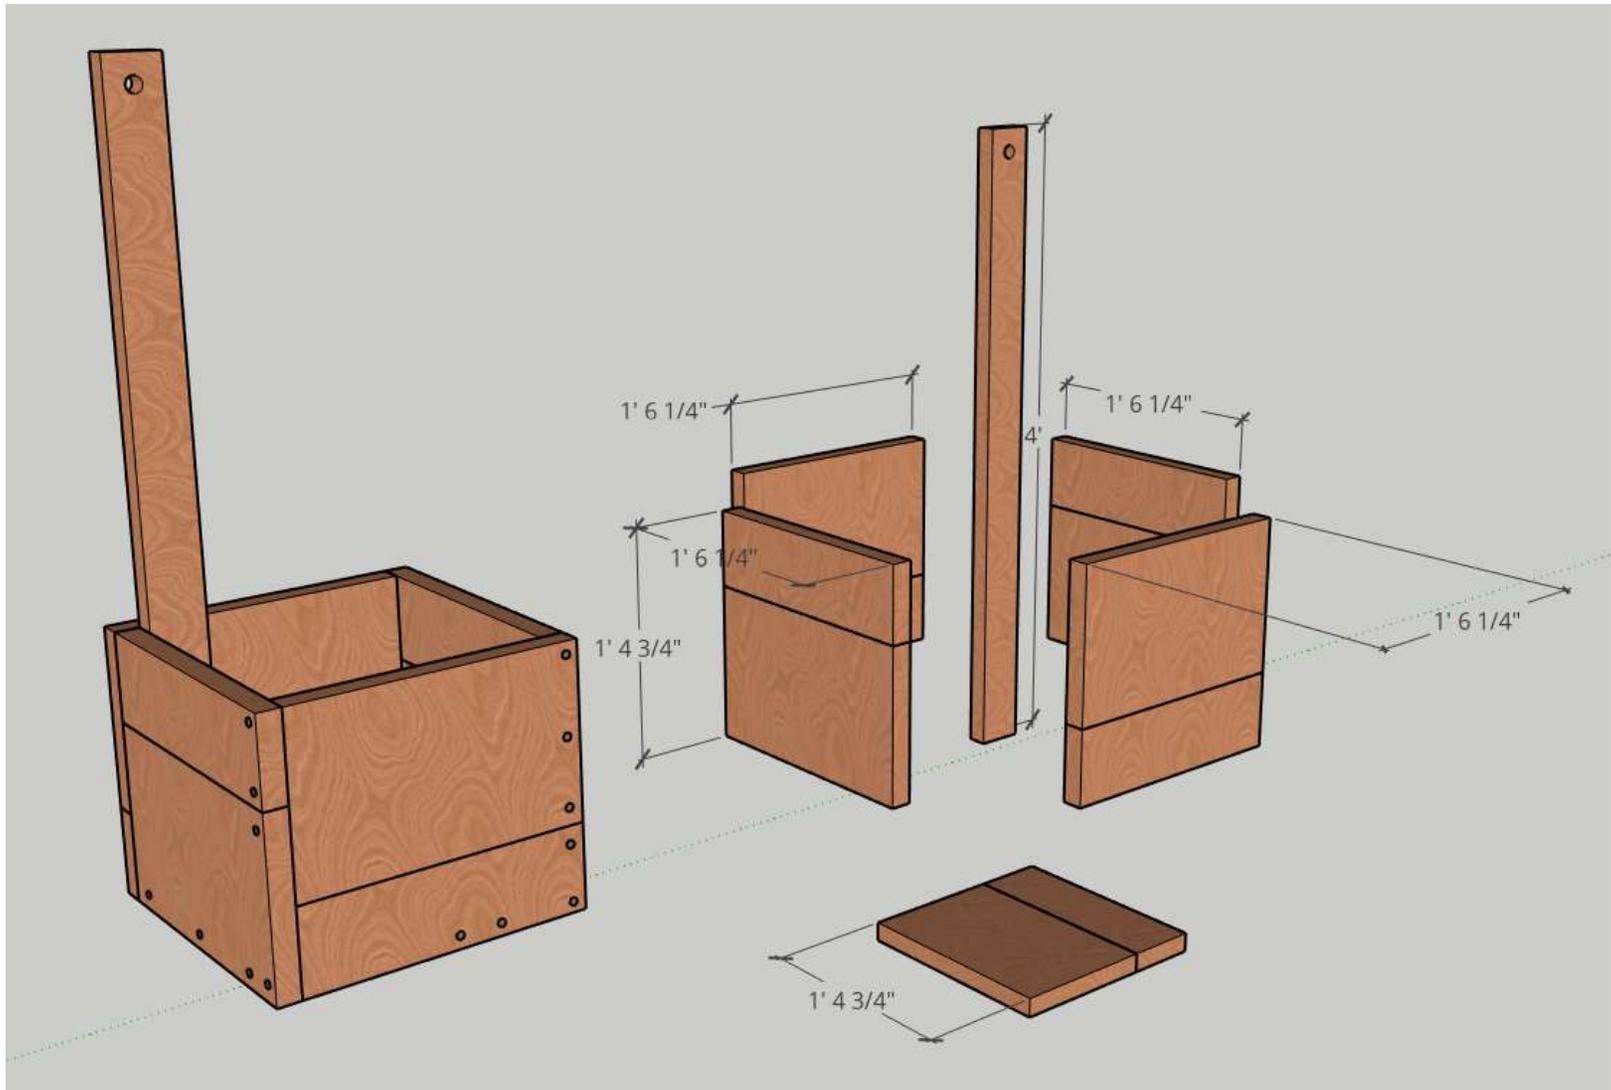

Potted plants / flowers

Rope to string between your planters

Cutting

Your 2x12 and your 2x6 will both be cut to create four 18.25" pieces for the sides and one 16.75" piece for the floor. Your 2x4 is simply cut in half to create two 4-ft pieces.

Assembly

The pieces are screwed together as shown.

Setup

The boxes were designed to either hold a potted plant or be filled with dirt for planting. To save cost, you can place a cinder block in the bottom to elevate a smaller potted plant.
